Sound (what I would need):

- sm57 mic
- 1 mic stand with a mic holder
- 1 extension cord with 6 inputs
- 4 long TRS 1/4 inch cables
- 2 stereo DI Boxes (these would be connected to the soundcard I will bring), I will be sending 2 stereo outs
- PA system with Subs (2 12inch tops and a sub) and two monitors so I can hear the stereo image
- A high table so I can stand while playing with these approximate measurements >>130 cm (length) x 60cm (width) would be great

Visuals (what I would need):

- Another laptop to play the file from
- Projector - The file will be on a USB, it would be great if someone could please hit play as soon as they hear a sound. For the first half of the performance the screen will be black then the visuals will start to appear at around 18 minutes. The person playing the file must use a platform like Quick Time Player or something similar to achieve the same result needed towards the end I will continue to improvise and the video will end with the aerial view of Beirut behind me it should stay there like a frozen image/ photograph/moment in time till the performance ends.

Duration of performance: approximately 45 minutes.
